iCrash :
A Crisis Management Case Study
Messir Analysis Document
- v 1.4 -

(*Report type: Default*)

Monday 19th December, 2016 - 00:03

Contents

1 Introduction . . . **7**
- 1.1 Overview . . . 7
- 1.2 Purpose and recipients of the document . . . 7
- 1.3 Application Domain . . . 7
- 1.4 Definitions, acronyms and abbreviations . . . 7
- 1.5 Document structure . . . 8

2 General Description . . . **9**
- 2.1 Domain Stakeholders . . . 9
  - 2.1.1 Communication Company . . . 9
  - 2.1.2 Humans . . . 10
  - 2.1.3 Coordinators . . . 10
  - 2.1.4 Administrator . . . 10
  - 2.1.5 Creator . . . 11
  - 2.1.6 Activator . . . 11
- 2.2 System's Actors . . . 12
- 2.3 Use Cases Model . . . 12
  - 2.3.1 Use Cases . . . 12
  - 2.3.2 Use Case Instance(s) . . . 24

3 Environment Model . . . **29**
- 3.1 Local view 01 . . . 29
- 3.2 Local view 02 . . . 29
- 3.3 Local view 03 . . . 29
- 3.4 Local view 04 . . . 29
- 3.5 Local view 05 . . . 29
- 3.6 Global view 01 . . . 29
- 3.7 Actors and Interfaces Descriptions . . . 34
  - 3.7.1 `actActivator` Actor . . . 34
  - 3.7.2 `actAdministrator` Actor . . . 35
  - 3.7.3 `actAuthenticated` Actor . . . 35
  - 3.7.4 `actComCompany` Actor . . . 36
  - 3.7.5 `actCoordinator` Actor . . . 36
  - 3.7.6 `actMsrCreator` Actor . . . 37

4 Concept Model . . . **39**
- 4.1 PrimaryTypes-Classes . . . 39
  - 4.1.1 Local view 01 . . . 39
  - 4.1.2 Local view 02 . . . 39
  - 4.1.3 Local view 03 . . . 39

4.1.4 Local view 04 . . . 39
4.1.5 Global view 01 . . . 39
4.2 PrimaryTypes-Datatypes . . . 39
4.2.1 Local view 06 . . . 39
4.2.2 Global view 01 . . . 42
4.3 SecondaryTypes-Datatypes . . . 42
4.3.1 Local view 01 . . . 42
4.4 Concept Model Types Descriptions . . . 42
4.4.1 Primary types - Class types descriptions . . . 42
4.4.2 Primary types - Datatypes types descriptions . . . 45
4.4.3 Primary types - Association types descriptions . . . 49
4.4.4 Primary types - Aggregation types descriptions . . . 49
4.4.5 Secondary types - Class types descriptions . . . 50
4.4.6 Secondary types - Datatypes types descriptions . . . 50
4.4.7 Secondary types - Association types descriptions . . . 50
4.4.8 Secondary types - Aggregation types descriptions . . . 50
4.4.9 Secondary types - Composition types descriptions . . . 50

5 Operation Model . . . 51
5.1 Environment - Out Interface Operation Scheme for actActivator . . . 51
5.1.1 Operation Model for oeSetClock . . . 51
5.1.2 Operation Model for oeSollicitateCrisisHandling . . . 53
5.2 Environment - Out Interface Operation Scheme for actAdministrator . . . 56
5.2.1 Operation Model for oeAddCoordinator . . . 56
5.2.2 Operation Model for oeDeleteCoordinator . . . 60
5.2.3 Operation Model for oeEditCoordinator . . . 63
5.3 Environment - Out Interface Operation Scheme for actAuthenticated . . . 64
5.3.1 Operation Model for oeLogin . . . 64
5.3.2 Operation Model for oeSMS . . . 67
5.3.3 Operation Model for oeLogout . . . 69
5.4 Environment - Out Interface Operation Scheme for actComCompany . . . 71
5.4.1 Operation Model for oeAlert . . . 71
5.5 Environment - Out Interface Operation Scheme for actCoordinator . . . 79
5.5.1 Operation Model for oeCloseCrisis . . . 79
5.5.2 Operation Model for oeGetAlertsSet . . . 81
5.5.3 Operation Model for oeGetCrisisSet . . . 82
5.5.4 Operation Model for oeInvalidateAlert . . . 84
5.5.5 Operation Model for oeReportOnCrisis . . . 86
5.5.6 Operation Model for oeSetCrisisHandler . . . 88
5.5.7 Operation Model for oeSetCrisisStatus . . . 91
5.5.8 Operation Model for oeSetCrisisType . . . 93
5.5.9 Operation Model for oeValidateAlert . . . 95
5.6 Environment - Out Interface Operation Scheme for actMsrCreator . . . 97
5.6.1 Operation Model for oeCreateSystemAndEnvironment . . . 97
5.7 Environment - Actor Operation Scheme for actMsrCreator . . . 101
5.7.1 Operation Model for init . . . 101
5.8 Primary Types - Operation Schemes for Class ctAdministrator . . . 103
5.8.1 Operation Model for init . . . 103
5.9 Primary Types - Operation Schemes for Class ctAlert . . . 104

5.9.1 Operation Model for init . . . 104
5.9.2 Operation Model for isSentToCoordinator . . . 105
5.10 Primary Types - Operation Schemes for Class ctAuthenticated . . . 106
5.10.1 Operation Model for init . . . 106
5.11 Primary Types - Operation Schemes for Class ctCoordinator . . . 107
5.11.1 Operation Model for init . . . 107
5.12 Primary Types - Operation Schemes for Class ctCrisis . . . 109
5.12.1 Operation Model for init . . . 109
5.12.2 Operation Model for handlingDelayPassed . . . 110
5.12.3 Operation Model for maxHandlingDelayPassed . . . 112
5.12.4 Operation Model for isSentToCoordinator . . . 113
5.12.5 Operation Model for isAllocatedIfPossible . . . 114
5.13 Primary Types - Operation Schemes for Class ctHuman . . . 116
5.13.1 Operation Model for init . . . 116
5.13.2 Operation Model for isAcknowledged . . . 118
5.14 Primary Types - Operation Schemes for Class ctState . . . 118
5.14.1 Operation Model for init . . . 118
5.15 Primary Types - Operation Schemes for Datatype dtAlertID . . . 120
5.15.1 Operation Model for is . . . 120
5.16 Primary Types - Operation Schemes for Datatype dtCode . . . 121
5.16.1 Operation Model for is . . . 121
5.17 Primary Types - Operation Schemes for Datatype dtComment . . . 122
5.17.1 Operation Model for is . . . 122
5.18 Primary Types - Operation Schemes for Datatype dtCoordinatorID . . . 123
5.18.1 Operation Model for is . . . 123
5.19 Primary Types - Operation Schemes for Datatype dtCrisisID . . . 125
5.19.1 Operation Model for is . . . 125
5.20 Primary Types - Operation Schemes for Datatype dtGPSLocation . . . 126
5.20.1 Operation Model for getGeographicalLocation . . . 126
5.20.2 Operation Model for is . . . 126
5.20.3 Operation Model for isNearTo . . . 127
5.21 Primary Types - Operation Schemes for Datatype dtLatitude . . . 129
5.21.1 Operation Model for is . . . 129
5.22 Primary Types - Operation Schemes for Datatype dtLogin . . . 130
5.22.1 Operation Model for is . . . 130
5.23 Primary Types - Operation Schemes for Datatype dtLongitude . . . 131
5.23.1 Operation Model for is . . . 131
5.24 Primary Types - Operation Schemes for Datatype dtPassword . . . 133
5.24.1 Operation Model for is . . . 133
5.25 Primary Types - Operation Schemes for Datatype dtPhoneNumber . . . 134
5.25.1 Operation Model for is . . . 134
5.26 Primary Types - Operation Schemes for Enumeration etAlertStatus . . . 135
5.26.1 Operation Model for is . . . 135
5.27 Primary Types - Operation Schemes for Enumeration etCrisisStatus . . . 136
5.27.1 Operation Model for is . . . 136
5.28 Primary Types - Operation Schemes for Enumeration etCrisisType . . . 137
5.28.1 Operation Model for is . . . 137
5.29 Primary Types - Operation Schemes for Enumeration etGeographicalLocation . . . 138
5.29.1 Operation Model for is . . . 138

5.30 Primary Types - Operation Schemes for Enumeration etHumanKind . . . 139
5.30.1 Operation Model for is . . . 139
5.31 Secondary Types - Operation Schemes for Classes . . . 140
5.32 Secondary Types - Operation Schemes for Datatype dtSMS . . . 140
5.32.1 Operation Model for is . . . 140
5.33 Secondary Types - Operation Schemes for Enumerations . . . 141

6 Test Model(s) . . . 143
6.1 Test Model for testcase01 . . . 143
6.1.1 Test Steps Specification . . . 143
6.1.2 Test Case Instance - instance01 . . . 165
6.1.3 Test Case Instance - instance01Part01 . . . 165
6.1.4 Test Case Instance - instance01Part02 . . . 167

7 Additional Constraints . . . 169
7.1 Quality Constraints . . . 169
7.1.1 Functional suitability . . . 169
7.1.2 Performance efficiency . . . 169
7.1.3 Compatibility . . . 170
7.1.4 Usability . . . 170
7.1.5 Reliability . . . 171
7.1.6 Security . . . 172
7.1.7 Maintainability . . . 172
7.1.8 Portability . . . 173
7.2 Other Constraints . . . 174

A Undocumented Messir Specification Elements . . . 175
A.1 Undocumented Use Case Instances . . . 175
A.1.1 Undocumented Use Case Instances - Summary Level . . . 175
A.1.2 Undocumented Use Case Instances - User-Goal Level . . . 175
A.1.3 Undocumented Use Case Instance Views . . . 175
A.2 Undocumented Concept Model Views . . . 175
A.3 Undocumented Test-Case Instance Specifications . . . 175

Chapter 1

Introduction

1.1 Overview

iCrash is a simple system dedicated to any person who wants to inform of a car crash crisis situation in order to allow for crisis handling. At anytime and anywhere, anyone can be the witness or victim of a car crash and might be in a situation allowing for alerting this crisis. The *iCrash* system has for objectives to support crisis declaration and secure administration and crisis handling by the *iCrash* professional users.

1.2 Purpose and recipients of the document

This document is an analysis document complying with the Messir methodology [?]. Its intent is to provide an example of a precise specification of the functional properties of the *iCrash* system.

The recipients of this document are:

- the *iCrash* system's buyer company (ABC): this document is used as a contractual document jointly with any other document considered as useful (as requirement elicitation document, ...) in order to have a higher degree of precision in requirement description. It is also used as a basis document for the *iCrash* system validation using specification based testing.
- the *iCrash* system development company (ADC) is expected to use this document as the basis for development (mainly design, implementation, maintenance). It is also used for verification and validation using test plans defined using the analysis models described in this document and according to the Messir methodology.

1.3 Application Domain

The *iCrash* system belongs to the Crisis Management Systems Domain. It is a system dedicated to crisis professional and non professional end users. It has to be considered as an autonomous and external service for the society. It is not an institutional system certified and guaranteed by any governmental entity and thus, must be used with caution.

1.4 Definitions, acronyms and abbreviations

N.A.

1.5 Document structure

The document structure is designed to be coherent with the Messir methodology [?]. Section 2 provides a general description of the system purpose, its users, its environment and some general non functional requirements. A more detailed description of the non functional requirements, if any, are provided in section **??**. The system operation triggered by events sent by the external actors belonging to the environment are described in Section 3. The *iCrash* concepts used to represent the any persistent or transient information is given in Section 4. The precise specification of the system operations in term of system's state changes, events sent together with the constraints on the allowed sequences of system operations are described in Section 5.

Chapter 2

General Description

In the context of the Messir method, the information provided in this section is intended to present the system for which the Messir analysis is provided. The content of this section is made accordingly to the requirements elicitation document that might have been done during the project but also adapted coherently in order to be an abstract introduction to the Messir analysis.

2.1 Domain Stakeholders

All stakeholders of the system are detailed in this section. After a brief description of a stakeholder, its objectives are first stated. Thereafter, the responsibilities of the stakeholder are detailed which help to achieve the stakeholder objectives to a certain degree. While the objectives characterize the general problems addressed by the *iCrash* system, the responsibilities describe concrete actions that are expected from a stakeholder. Some of these responsibilities can be traced looking at the use case described in Section B.1,and hence must be supported by the *iCrash* system. All stakeholders listed in this section have an interest in the system or are affected by the system in some way, but only a subset of the stakeholders are directly involved in the use cases described. Let us remind that use case diagrams or descriptions are not Messir analysis phase mandatory outputs. They are proposed as informal means to help understanding the semantics of the system specification made of the mandatory analysis models, which provide a complete executable specification.

2.1.1 Communication Company

A Communication Company is a company that has the capacity to ensure communication of information between its customers and the *iCrash* system. The objectives of a Communication Company are:

- to be able to deliver any SMS sent by any human to the *iCrash* 's phone number.
- to be able to transmit SMS messages from the ABC company that owns the *iCrash* system to any human having an SMS compatible device accessible using a phone number.

In order to achieve these objectives, the responsibilities of a Communication Company are:

- ensure confidentiality and integrity of the information sent by a human to the *iCrash* system or from the system to a human.
- to be always available and reliable.

2.1.2 Humans

A human is any person who considers himself related to a car crash either as a witness, a victim or an anonymous person. The objectives of a human are:

- inform the *iCrash* system about the crisis situation he detected.
- be sure that the ABC company has been informed about the situation.
- to be informed about the situation of the crisis he his related to as a victim or witness.

In order to achieve these objectives, the responsibilities of a human are:

- to provide has much details as possible concerning the crisis to the ABC company.
- to declare a crisis only if the crisis is real.
- to have access to the SMS compatible communication device he used to communication with the *iCrash* system.

2.1.3 Coordinators

A coordinator is a employee of the ABC company being responsible of handling one or several crisis. The objectives of a coordinator are:

- to securely monitor the existing alerts and crisis.
- to securely manage alerts and crisis until their termination.

In order to achieve these objectives, the responsibilities of a coordinator are:

- to be capable to determine how an alert received should be considered.
- to be available to react to requests to handle alerts and crisis.
- to be autonomous in handling crisis and to report on its handling.
- to be able to decide when a crisis or an alert can be closed.
- to know its system identification information for secure usage of the system.

2.1.4 Administrator

An administrator is a employee of the ABC company being responsible of administrating the *iCrash* system. The objectives of an administrator are:

- to add or delete coordinator actors from the system and its environment.

In order to achieve these objectives, the responsibilities of a coordinator are:

- know the company employees that can be coordinators and that have access to the system.
- to know its system identification information for secure usage of the system.
- to know the security policy of the ABC company.
- to communicate the coordinators their identification information for secure system usage.

2.1.5 Creator

Any system has a `Creator` stakeholder which is a technician who is installing the *iCrash* system on the targeted deployment infrastructure.

The objectives of a `Creator` are:

- to install the *iCrash* system
- to define the values for the initial system's state
- to define the values for the initial system's environment
- to ensure the integration of the *iCrash* system with its initial environment

In order to achieve these objectives, the responsibilities of a `Creator` are:

- provide the necessary data to the *iCrash* system for its initialization.

2.1.6 Activator

An `activator` is a logical representation of the active part the *iCrash* system. It represents an implicit stakeholder belonging to the system's environment that interacts with the *iCrash* system autonomously without the need of a external entity. It is usually used for representing time triggered functionalities.

The objectives of a `activator` are:

- to communicate the current time to the system
- to notify the administrator that some crisis are still pending for a too long time.

In order to achieve these objectives, the responsibilities of a `activator` are:

- to know the current universal time
- to send the messages to the system according to the time constraints specifically defined for it.

2.2 System's Actors

The objective of this section is not to provide the full requirement elicitation document in this section but to reuse a part of this document to provide a informal introduction to the Messir specification of the system under development. The use case model is made of a use case diagrams modelling abstractly and informally the actors and their use cases together with a set of use cases descriptions. In addition, those diagrams and description tables are adapted to the Messir specification since actor and messages names together with parameters are partly adapted to be consistent with the specification identifiers (see [?] for more details).

Among all the stakeholders presented in the previous section, we can determine five types of direct actors[1]:

- `actComCompany`: for the Communication Company stakeholder.
- `actAdministrator`: for the Administrator stakeholder.
- `actCoordinator`: for the Coordinators stakeholders.
- `actActivator`: for the Activator stakeholder.
- `actMsrCreator`: for the Creator stakeholder.

In addition to those system actors, we can add five other types of actors related to the system's ones. Those five actors are grouped into two categories:

- *Indirect actors*
  - *Witness*: for any human that is a witness of a car crash
  - *Victim*: for any human that is a victim of a car crash
  - *Anonymous*: for any human that want to inform about a car crash while staying anonymous.
- *Abstract actors*
  - `actHuman`: represent abstractly any kind of human being actor wanting to communicate with the ABC system in the context of a car crash.
  - `actAuthenticated`: for the logical Activator stakeholder.

2.3 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the Messir method and inspired by the standard Cokburn template [?].

2.3.1 Use Cases

2.3.1.1 summary-suDeployAndRun

The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.

[1]The naming conventions in Messir propose to start each type name by lowercase letters indicating the meta model type used (i.e. act for actors, ct for class type, ... In addition to ease the reading it makes the translational semantics into Prolog code more straightforward.

Use-Case Description	
Name	suDeployAndRun
Scope	system
Level	summary
Primary actor(s)	
1	actAdministrator[active]
Secondary actor(s)	
1	actMsrCreator[active]
2	actCoordinator[active, multiple]
3	actActivator[proactive]
4	actComCompany[active]
Goal(s) description	
The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.	
Reuse	
1	oeCreateSystemAndEnvironment [1..1]
2	ugAdministrateTheSystem [1..*]
3	suGlobalCrisisHandling [1..*]
4	oeSetClock [1..*]
5	oeSollicitateCrisisHandling [0..*]
6	oeAlert [1..*]
Protocol condition(s)	
1	the iCrash system has never been deployed and used
Pre-condition(s)	
1	none
Main post-condition(s)	
1	the iCrash system has been created and has handled the crisis situations for which it received alerts through the communication company.
Main Steps	
a	the actor actMsrCreator executes the oeCreateSystemAndEnvironment use case
b	the actor actAdministrator executes the ugAdministrateTheSystem use case
c	the actor actComCompany executes the oeAlert use case
d	the actor actActivator executes the oeSetClock use case
e	the actor actActivator executes the oeSollicitateCrisisHandling use case
f	the actor actCoordinator executes the suGlobalCrisisHandling use case
Steps Ordering Constraints	
1	step (a) must be always the first step.
2	step (f) can be executed by different actCoordinator actors.
3	if (e) then previously (d).

Figure 2.1 shows the use case diagram for the suDeployAndRun summary use case

2.3.1.2 summary-suGlobalCrisisHandling

the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.

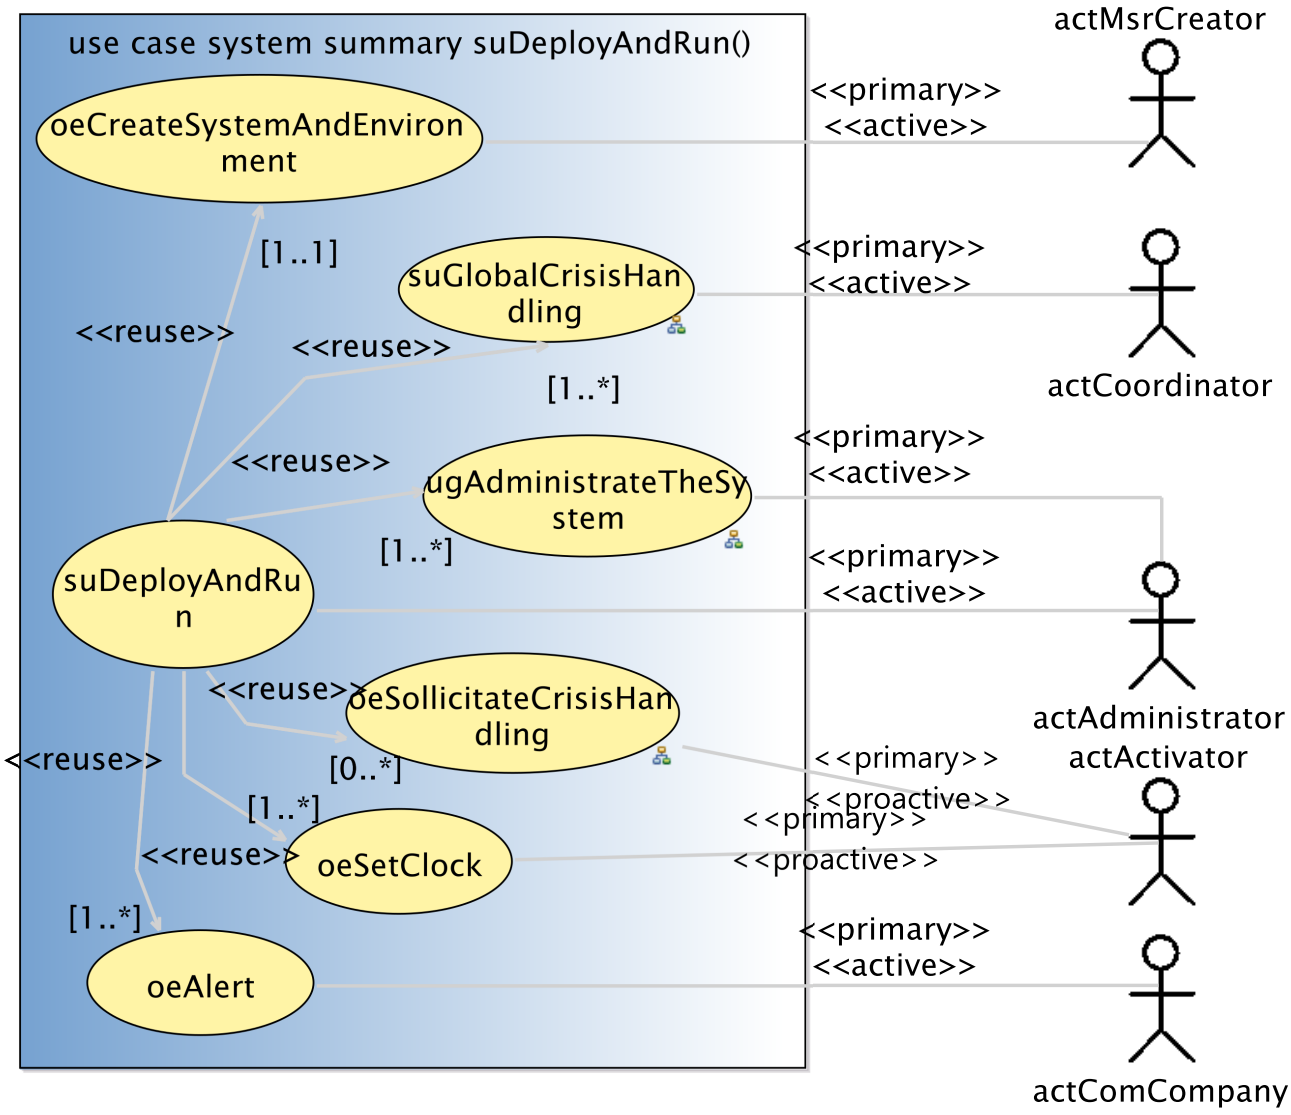

Figure 2.1: suDeployAndRun summary use case

Use-Case Description	
Name	suGlobalCrisisHandling
Scope	system
Level	summary
Primary actor(s)	
1	actCoordinator[active]
Goal(s) description	
the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.	
Reuse	
1	ugSecurelyUseSystem [1..*]
2	ugMonitor [1..*]
3	ugManageCrisis [1..*]
Protocol condition(s)	
1	the iCrash system has been deployed
2	the coordinator actor involded in the use case has been declared by the actor actAdministrator
Pre-condition(s)	
1	none
Main post-condition(s)	
1	modifications have been made by the coordinator on existing alerts or crisis OR the coordinator requested an updated status on existing alerts or crisis.
Main Steps	
a	the actor actCoordinator executes the ugSecurelyUseSystem use case
b	the actor actCoordinator executes the ugMonitor use case
c	the actor actCoordinator executes the ugManageCrisis use case
Steps Ordering Constraints	
1	steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)).
2	steps (a) (b) and (c) can be executed multiple times.

Figure 2.2 shows the use case diagram for the suGlobalCrisisHandling user goal use case

2.3.1.3 usergoal-ugAdministrateTheSystem

the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

Use-Case Description	
Name	ugAdministrateTheSystem
Scope	system
Level	usergoal
Primary actor(s)	
1	actAdministrator[active]
Goal(s) description	
the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.	

continues in next page . . .

... Use-Case Description table continuation

Reuse	
1	ugSecurelyUseSystem [1..*]
2	oeAddCoordinator [1..*]
3	oeDeleteCoordinator [0..*]
4	oeEditCoordinator [0..*]
Protocol condition(s)	
1	the iCrash system has been deployed
Pre-condition(s)	
1	none
Main post-condition(s)	
1	modifications have been made to the system and its environment concerning existing or new coordinators.
Main Steps	
a	the actor actAdministrator executes the ugSecurelyUseSystem use case
b	the actor actAdministrator executes the oeAddCoordinator use case
c	the actor actAdministrator executes the oeDeleteCoordinator use case
d	the actor actAdministrator executes the oeEditCoordinator use case
Steps Ordering Constraints	
1	steps (a) (b) (c) and (d) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)).
2	steps (a) (b) (c) and (d) can be executed multiple times.

Figure 2.3 shows the use case diagram for the ugAdministrateTheSystem user goal use case

2.3.1.4 usergoal-ugManageCrisis

The goal is to do an action that makes the handling of a crisis or an alert progress.

USE-CASE DESCRIPTION	
Name	ugManageCrisis
Scope	system
Level	usergoal
Primary actor(s)	
1	actCoordinator[active]
Goal(s) description	
The goal is to do an action that makes the handling of a crisis or an alert progress.	
Reuse	
1	oeValidateAlert [0..*]
2	oeSetCrisisStatus [0..*]
3	oeSetCrisisHandler [0..*]
4	oeReportOnCrisis [0..*]
5	oeCloseCrisis [0..*]
6	oeInvalidateAlert [0..*]
7	oeSetCrisisType [0..*]
Protocol condition(s)	
1	the iCrash system has been deployed

continues in next page ...

... Use-Case Description table continuation

Pre-condition(s)	
1	none
Main post-condition(s)	
1	there exist one alert or one crisis whose related information has been changed.
Main Steps	
a	the actor `actCoordinator` executes the `oeValidateAlert` use case
b	the actor `actCoordinator` executes the `oeSetCrisisStatus` use case
c	the actor `actCoordinator` executes the `oeSetCrisisHandler` use case
d	the actor `actCoordinator` executes the `oeReportOnCrisis` use case
e	the actor `actCoordinator` executes the `oeCloseCrisis` use case
f	the actor `actCoordinator` executes the `oeInvalidateAlert` use case
g	the actor `actCoordinator` executes the `oeSetCrisisType` use case
Steps Ordering Constraints	
1	managing a crisis is doing one of the indicated use cases.

Figure 2.4 shows the use case diagram for the ugManageCrisis user goal use case

2.3.1.5 usergoal-ugMonitor

the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake.

USE-CASE DESCRIPTION	
Name	ugMonitor
Scope	system
Level	usergoal
Primary actor(s)	
1	`actCoordinator[active]`
Goal(s) description	
the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake.	
Reuse	
1	`oeGetCrisisSet [0..*]`
2	`oeGetAlertsSet [0..*]`
Protocol condition(s)	
1	the iCrash system has been deployed
Pre-condition(s)	
1	none
Main post-condition(s)	
1	none
Main Steps	
a	the actor `actCoordinator` executes the `oeGetAlertsSet` use case
b	the actor `actCoordinator` executes the `oeGetCrisisSet` use case

1
Additional Information
none

Figure 2.7 shows the use case diagram for the oeSetCrisisHandler subfunction use case

2.3.1.8 subfunction-oeSollicitateCrisisHandling

the actActivator's goal is to decrease the number of unhandled crisis.

USE-CASE DESCRIPTION	
Name	oeSollicitateCrisisHandling
Scope	system
Level	subfunction
Primary actor(s)	
1	`actActivator[proactive]`
Secondary actor(s)	
1	`actCoordinator[passive, multiple]`
2	`actAdministrator[passive]`
Goal(s) description	
the actActivator's goal is to decrease the number of unhandled crisis.	
Protocol condition(s)	
1	the iCrash system has been deployed.
2	there exist some crisis still pending and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.
Pre-condition(s)	
1	none
Main post-condition(s)	
1	a simple text message ieMessage('There are alerts not treated since more than the defined delay. Please REACT !') is sent to the system administrator and to all the coordinators of the environment for each crisis that is known to be not handled and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.')
2	the reminder period for the concerned crisis is initialized.

Figure 2.8 shows the use case diagram for the oeSollicitateCrisisHandling subfunction use case

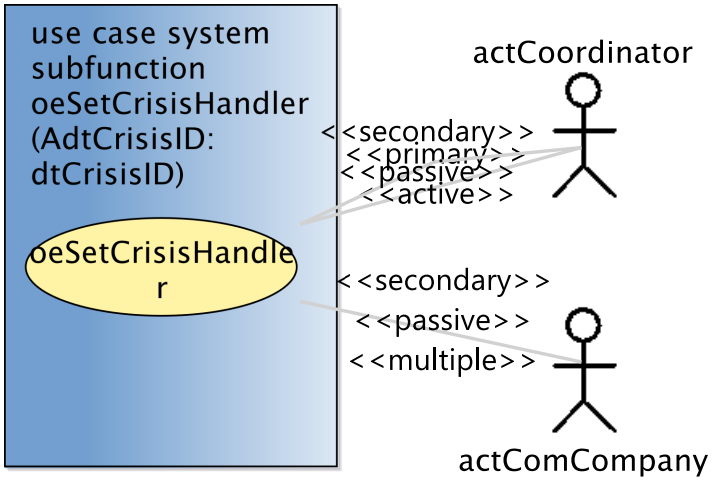

Figure 2.7: oeSetCrisisHandler subfunction use case

2.3.2 Use Case Instance(s)

2.3.2.1 Use-Case Instance - uciSimpleAndCompletePart01:suDeployAndRun

First part of a use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
Instantiated Use Case	
suDeployAndRun	
Instance ID	
uciSimpleAndCompletePart01	
Remarks	
a	shows the system initilization and the first administrative tasks by the administrator.
b	The unique and always existing `actMsrCreator` actor instance (named here `theCreator`) requests the initialization of the system and its environment (made of one administrator identified here by `bill`), one activator actor (identified by `theClock`) and indicating that the number of communication company actor instances for the system's environment is 4 (one of them is identified here by `tango`)
c	the administrator logs in to initialize a coordinator
d	an alert is received. Time is goind one without having the coordinator handling the alert which let's the proactive actor trigger the automatic sollicitation of crisis handling.
e	this first part stops before the coordinator logs in the system.

Figure 2.9 shows the sequence diagram representing the first part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

2.3.2.2 Use-Case Instance - uciSimpleAndCompletePart02:suDeployAndRun

Second part of a simple and complete use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
Instantiated Use Case	
suDeployAndRun	
Instance ID	
uciSimpleAndCompletePart02	
Remarks	
a	starts when the coordinator logs in the system until the full handling of all the existing crisis.
b	shows an instantiated case of handling of a crisis by a coordinator until its closure after reporting.

Figure 2.10 shows the sequence diagram representing the second part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

2.3.2.3 Use-Case Instance - uciSimpleAndCompletePart03:suDeployAndRun

3.7 Actors and Interfaces Descriptions

We provide for the given views the description of the actors together with their associated input and output interface descriptions.

3.7.1 `actActivator` Actor

Actor	
actActivator	
represents a logical actor for time automatic message sending based on system's or environment status.	
OutputInterfaces	
OUT 1	**[proactive] oeSollicitateCrisisHandling():ptBoolean** used to avoid crisis to stay too long in an not handled status.
OUT 2	**[proactive] oeSetClock(AcurrentClock:dtDateAndTime):ptBoolean** used to update the system's time

3.7.2 `actAdministrator` Actor

Actor	
actAdministrator	
represents an actor responsible of administration tasks for the *iCrash* system.	
Extends	
icrash.environment.actAuthenticated	
OutputInterfaces	
OUT 1	**oeAddCoordinator(AdtCoordinatorID:dtCoordinatorID, AdtLogin:dtLogin, AdtPassword:dtPassword, AdtPhoneNumber:dtPhoneNumber, AetGeoraphicalLocation:etGeographicalLocation, AetCrisisType:etCrisisType):ptBoolean** sent to add a new coordinator in the system's post state and environment's post state.
OUT 2	**oeDeleteCoordinator(AdtCoordinatorID:dtCoordinatorID):ptBoolean** sent to delete an existing coordinator in the system's post state and environment's post state.
OUT 3	**oeEditCoordinator(AdtCoordinatorID:dtCoordinatorID, AetGeoraphicalLocation:etGeographicalLocation, AetCrisisType:etCrisisType):ptBoolean** sent to edit an existing coordinator in the system's post state and environment's post state.
InputInterfaces	
IN 1	**ieCoordinatorAdded():ptBoolean** its reception confirms the creation of the requested coodinator.
IN 2	**ieCoordinatorDeleted():ptBoolean** its reception confirms the deletion of the requested coodinator.
IN 3	**ieCoordinatorEdited():ptBoolean** its reception confirms the edition of the requested coodinator.

3.7.3 `actAuthenticated` Actor

Actor	
actAuthenticated	
abstract actor providing reusable input and output interfaces for actors that need to authenticate themselves.	
OutputInterfaces	
OUT 1	**oeLogin(AdtLogin:dtLogin, AdtPassword:dtPassword):ptBoolean** sent to request authorization to request access secured system operations.
OUT 2	**oeLogout():ptBoolean**

continues in next page . . .

... Actor table continuation

	sent to end the secured access to specific system operations.
OUT 3	**oeSMS(AdtString:dtString):ptBoolean**
	sent to request authorization to request access secured system operations.
InputInterfaces	
IN 1	**ieMessage(AMessage:ptString):ptBoolean**
	allows for receiving general textual messages.

3.7.4 `actComCompany` Actor

Actor	
actComCompany	
represents the communication company stakeholder ensuring the input/ouput of textual messages with humans having communicaiton devices.	
OutputInterfaces	
OUT 1	**oeAlert(AetHumanKind:etHumanKind, AdtDate:dtDate, AdtTime:dtTime, AdtPhoneNumber:dtPhoneNumber, AdtGPSLocation:dtGPSLocation, AdtComment:dtComment, AetCrisisType:etCrisisType):ptBoolean**
	sent to alert of a potential crisis situation.
InputInterfaces	
IN 1	**ieSmsSend(AdtPhoneNumber:dtPhoneNumber, AdtSMS:dtSMS):ptBoolean**
	allows for receiving textual messages to be dispatched to the communication company customers having the provided phone number.

3.7.5 `actCoordinator` Actor

Actor	
actCoordinator	
represents actor responsible of handling one or several crisis for the *iCrash* system.	
Extends	
icrash.environment.actAuthenticated	
OutputInterfaces	
OUT 1	**oeInvalidateAlert(AdtAlertID:dtAlertID):ptBoolean**
	sent to indicate that an alert should be considered as closed.
OUT 2	**oeCloseCrisis(AdtCrisisID:dtCrisisID):ptBoolean**
	sent to indicate that a crisis should be considered as closed.
OUT 3	**oeGetAlertsSet(AetAlertStatus:etAlertStatus):ptBoolean**
	sent to request all the ctAlert instances having a specific status.
OUT 4	**oeGetCrisisSet(AetCrisisStatus:etCrisisStatus):ptBoolean**
	sent to request all the ctCrisis instances having a specific status.
OUT 5	**oeSetCrisisHandler(AdtCrisisID:dtCrisisID):ptBoolean**
	sent to declare himself as been the handler of a crisis having the specified id.
OUT 6	**oeReportOnCrisis(AdtCrisisID:dtCrisisID, AdtComment:dtComment):ptBoolea**
	sent to update the textual information available for a specific handled crisis.
OUT 7	**oeSetCrisisStatus(AdtCrisisID:dtCrisisID, AetCrisisStatus:etCrisisStatu**
	sent to define the handling status of a specific crisis.
OUT 8	**oeSetCrisisType(AdtCrisisID:dtCrisisID, AetCrisisType:etCrisisType):ptB**

continues in next page ...

. . . Actor table continuation

	sent to define the gravity type of a specific crisis.
OUT 9	**`oeValidateAlert(AdtAlertID:dtAlertID):ptBoolean`**
	sent to indicate that a specific alert is not a fake.
InputInterfaces	
IN 1	**`ieSendAnAlert(ActAlert:ctAlert):ptBoolean`**
	allows for receiving a requested ctAlert instance.
IN 2	**`ieSendACrisis(ActCrisis:ctCrisis):ptBoolean`**
	allows for receiving a requested ctCrisis instance.

3.7.6 `actMsrCreator` Actor

ACTOR	
actMsrCreator	
Represents the creator stakeholder in charge of state and environment initialization.	
OutputInterfaces	
OUT 1	**`oeCreateSystemAndEnvironment(AqtyComCompanies:ptInteger):ptBoolean`**
	sent to request the initialization of the system's class instances and the environment actors instances.

Chapter 4

Concept Model

4.1 PrimaryTypes-Classes

4.1.1 Local view 01

Figure 4.1 shows the local view on all the primary types class types.

4.1.2 Local view 02

Figure 4.2 shows the local view of the ctState primary type class type.

4.1.3 Local view 03

Figure 4.3 shows the local view of the ctAlert primary type class type.

4.1.4 Local view 04

Figure 4.4 shows the local view of the ctCrisis primary type class type.

4.1.5 Global view 01

Figure 4.5 shows the global view on primary types class types showing the association(s) types with the actor classes of the environment model.

4.3 SecondaryTypes-Datatypes

4.3.1 Local view 01

Figure 4.8 shows the local view of the secondary types datatype types.

4.4 Concept Model Types Descriptions

This section provides the textual descriptions of all the types defined in the concept model and that can be part of the graphical views provided.

4.4.1 Primary types - Class types descriptions

The table below is providing comments on the graphical views given for the class types of the primary types. Type logical operations are precisely specified in the operation model.

CLASSES	
ctAdministrator	
used to caracterize internally the entity that is responsible of administrating the *iCrash* system.	
extends	icrash.concepts.primarytypes.classes.ctAuthenticated
operation	**`init(Alogin:dtLogin, Apwd:dtPassword, AphoneNumber:dtPhoneNumber):pt`**

continues in next page . . .

. . . Classes table continuation

	used to initialize the current object as a new instance of the ctAdministrator type.
ctAlert	
Used to model crisis alerts sent by any human having communication capability using communication companies belonging to the system's environment	
attribute	**comment: dtComment**
	a textual description providing unstructured information on the alert.
attribute	**id: dtAlertID**
	the alert unique identification information.
attribute	**instant: dtDateAndTime**
	the date and time at which the alert notification has been sent.
attribute	**location: dtGPSLocation**
	the position of the alert provided by the space-based satellite navigation system used by the human using the communication company to inform the *iCrash* system of a crisis.
attribute	**status: etAlertStatus**
	the alert validation status
operation	**init(Aid:dtAlertID, Astatus:etAlertStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment, AcrisisType:etCrisisType):ptBoolean**
	used to initialize the current object as a new instance of the ctAlert type.
operation	**isSentToCoordinator(AactCoordinator:actCoordinator):ptBoolean**
	used to provide a given coordinator with current alert information.
ctAuthenticated	
used to model system's representation about actors that need to authenticate to access some specific functionalities.	
attribute	**login: dtLogin**
	an identifier for authentication.
attribute	**phoneNumber: dtPhoneNumber**
	use for identifing a user phone number
attribute	**pwd: dtPassword**
	a key for authentication.
attribute	**vpIsLogged: ptBoolean**
	used to determine the access status.
attribute	**vpIsLoggedStep1: ptBoolean**
	used to determine the correctness of password and login.
operation	**init(Alogin:dtLogin, Apwd:dtPassword, AphoneNumber:dtPhoneNumber):ptBoo**
	used to initialize the current object as a new instance of the ctAuthenticated type.
ctCoordinator	
used to model system's representation about the actors that have the responsibility to handle alerts and crisis.	
extends	icrash.concepts.primarytypes.classes.ctAuthenticated
attribute	**crisisType: etCrisisType**
	used to inentify crisisType for which coordinator is assigned.
attribute	**geographicalLocation: etGeographicalLocation**
	used to inentify geographical location for which coordinator is assigned.
attribute	**id: dtCoordinatorID**
	a unique identification information.

continues in next page . . .

... Classes table continuation

operation	**init(Aid:dtCoordinatorID, Alogin:dtLogin, Apwd:dtPassword, AphoneNumber:dtPhoneNumber, AgeographicalLocation:etGeographicalLocation, AcrisisType:etCrisisType):ptBoolean** used to initialize the current object as a new instance of the ctCoordinator type.
ctCrisis	
Used to model crisis that are infered from the reception of at least one alert message. Crisis aer entities that are handled by the *iCrash* system.	
attribute	**comment: dtComment** a textual description providing unstructured information on the crisis handling.
attribute	**id: dtCrisisID** the crisis unique identification information.
attribute	**instant: dtDateAndTime** the date and time at which the first related alert notification has been sent.
attribute	**location: dtGPSLocation** the position of the crisis equal by the one of the first alert received and associated to the crisis.
attribute	**status: etCrisisStatus** the crisis handling status.
attribute	**type: etCrisisType** an indication of the gravity of the crisis.
operation	**handlingDelayPassed():ptBoolean** used to determine if the crisis stood too longly in a pending status since last reminder.
operation	**init(Aid:dtCrisisID, Atype:etCrisisType, Astatus:etCrisisStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment):ptBoolean** used to initialize the current object as a new instance of the ctAlert type.
operation	**isAllocatedIfPossible():ptBoolean** used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled.
operation	**isSentToCoordinator(AactCoordinator:actCoordinator):ptBoolean** used to provide a given coordinator with current crisis information.
operation	**maxHandlingDelayPassed():ptBoolean** used to determine if the crisis stood too longly in a pending status since its creation.
ctHuman	
used to model system's representation about the indirect actors that has alerted of potential crisis.	
attribute	**id: dtPhoneNumber** the number of the communication device used to send an alert to *iCrash* system.
attribute	**kind: etHumanKind** role with respect to the alert notified.
operation	**init(Aid:dtPhoneNumber, Akind:etHumanKind):ptBoolean** `init`: used to initialize the current object as a new instance of the ctHuman type.
ctState	
used to model the system. Each system specified using Messir must include a ctState class for which there is only one instance at any state of the abstract machine after creation.	
attribute	**clock: dtDateAndTime** used to represent the system local time.
attribute	**crisisReminderPeriod: dtSecond**

continues in next page ...

... Classes table continuation

	used to define the delay between two reminders after which a reminder must be sent to the administrator and to the known coordinators to encourage them to handle the crisis.
attribute	**maxCrisisReminderPeriod: dtSecond** used to define the maximum delay after which the crisis is ramdomly allocated to a coordinator if any or an alert message is sent to the administrator in order to encourage him to add coordinators.
attribute	**nextValueForAlertID: dtInteger** `nextValueForAlertID: dtInteger`: used to associate each alert declared with a unique idenitification value.
attribute	**nextValueForCrisisID: dtInteger** used to associate each crisis declared with a unique idenitification value.
attribute	**vpLastReminder: dtDateAndTime** date and time of the last reminder.
attribute	**vpStarted: ptBoolean** used to avoid reacting to an actor message if the system is not started (i.e. oeCreateSystemAndEnvironment not executed).
operation	**init(AnextValueForAlertID:dtInteger, AnextValueForCrisisID:dtInteger, Aclock:dtDateAndTime, AcrisisReminderPeriod:dtSecond, AmaxCrisisReminderPeriod:dtSecond, AvpLastReminder:dtDateAndTime, AvpStarted:ptBoolean):ptBoolean** used to initialize the current object as a new instance of the ctState type.

4.4.2 Primary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the primary types.

DATATYPES	
dtAlertID	
A string used to identify alerts.	
extends	dtString
operation	**is():ptBoolean** used to determine which strings are considered as valid alert identifiers.
dtCode	
a datatype which generates the code	
attribute	**generatedCode: dtString** an attribute in dtString in which the code is stored
operation	**is():ptBoolean** used to determine which strings are considered as valid generated codes.
dtComment	
a datatype made of a string value used to receive,store and send textual information about crisis and alerts.	
extends	dtString
operation	**is():ptBoolean** used to determine which strings are considered as valid comments.
dtCoordinatorID	
A string used to identify coordinators.	

continues in next page ...

... Datatypes table continuation

extends	dtString
operation	**is():ptBoolean**
	used to determine which strings are considered as valid coordinators identifiers.
dtCrisisID	
A string used to identify crisis.	
extends	dtString
operation	**is():ptBoolean**
	used to determine which strings are considered as valid crisis identifiers.
dtGPSLocation	
used to define coordinates of geograpical positions on earth. It is defined a couple made of a latitude and a longitude.	
attribute	**latitude: dtLatitude**
	for the latitude part of the coordinate.
attribute	**longitude: dtLongitude**
	for the longitude part of the coordinate.
operation	**is():ptBoolean**
	used to determine which couples are considered as valid dtGPSLocation values.
operation	**isNearTo(AGPSLocation:dtGPSLocation):ptBoolean**
	used to determine if locations are considered enough close to be treated as equivalent in the application domain context.
dtLatitude	
used to define a latitude value of a geograpical positions on earth.	
extends	dtReal
operation	**is():ptBoolean**
	used to determine which strings are considered as valid dtLatitude.
dtLogin	
a login string used to authentify an *iCrash* user	
extends	dtString
operation	**is():ptBoolean**
	used to determine which strings are considered as valid dtLogin.
dtLongitude	
used to define a longitude value of a geograpical positions on earth.	
extends	dtReal
operation	**is():ptBoolean**
	used to determine which strings are considered as valid dtLongitude.
dtPassword	
a password string used to authentify an *iCrash* user	
extends	dtString
operation	**is():ptBoolean**
	used to determine which strings are considered as valid dtPassword.
dtPhoneNumber	
a string used to store the phone number from the human declaring the crisis or the alert.	
extends	dtString
operation	**is():ptBoolean**
	used to determine which strings are considered as valid dtPhoneNumber.

Enumerations	
etAlertStatus	
this type is used to indicate the different validation status of an alert.	
operation	**is():ptBoolean** used to determine which litteral belongs to the enumeration.
etCrisisStatus	
this type is used to indicate the different handling status of a crisis.	
operation	**is():ptBoolean** used to determine which litteral belongs to the enumeration.
etCrisisType	
this type is used to indicate the different types of a crisis.	
operation	**is():ptBoolean** used to determine which litteral belongs to the enumeration.
etGeographicalLocation	
this type is used to indicate the different types of geographical locations.	
operation	**is():ptBoolean** used to determine which litteral belongs to the enumeration.
etHumanKind	
this type is used to indicate the kind of human that informs about a car crash crisis.	
operation	**is():ptBoolean** used to determine which litteral belongs to the enumeration.

4.4.3 Primary types - Association types descriptions

The table below is providing comments on the association types of the primary types.

Undirected associations
assctAlertctCrisis a crisis is related to one or more alerts as the alerts judged to concern all the same crisis due to their location. An alert alerts exactly one crisis.
assctAlertctHuman alerts are notified by human through the communication company. We need to keep an internal representation of those human to allow for communication of alert handling.
assctAuthenticatedactAuthenticated mainly used to determine if the login request of an authenticated actor can be granted based on the given credentials and the registered ones.
assctCoordinatoractCoordinator frequent messages must be sent to coordinator especially in relation to crisis they handle.
assctCrisisctCoordinator at any point in time we need to know if a coordinator is handling existing crisis or not.
assctHumanactComCompany in order to communicate with humans who informed about potential crisis, we need to record the communication company to use to send them messages.

4.4.4 Primary types - Aggregation types descriptions

There are no aggregation types for the primary types.

4.4.4.1 Primary types - Composition types descriptions

There are no composition types for the primary types.

4.4.5 Secondary types - Class types descriptions

There are no elements in this category in the system analysed.

4.4.6 Secondary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the secondary types.

DATATYPES	
dtSMS	
a datatype made of a string value used to send textual information to human mobile devices.	
attribute	**`value: ptString`** the textual information.
operation	**`is():ptBoolean`** used to determine which strings are considered as valid comments.

4.4.7 Secondary types - Association types descriptions

There are no association types for the secondary types.

4.4.8 Secondary types - Aggregation types descriptions

There are no aggregation types for the secondary types.

4.4.9 Secondary types - Composition types descriptions

There are no composition types for the secondary types.

Chapter 5

Operation Model

This section contains the operation schemes of each operation defined in either an actor, its output interface, in a primary or secondary type (class, datatype or enumeration types). The Messir OCL code listing is joined to the comment table.

5.1 Environment - Out Interface Operation Scheme for actActivator

5.1.1 Operation Model for oeSetClock

The `oeSetClock` operation has the following properties:

Operation	
oeSetClock[proactive]	
An active message used to statically set the date and time information in the system's state.	
Parameters	
1	**AcurrentClock: dtDateAndTime** the date and time to be considered as the actual one.
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is supposed to be created and initialized and the provided date and time value is greater than the one known by the system.
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the ctState instance post-state is updated to have its clock attribute equal to the given date and time.
Post-Condition (protocol)	
PostP 1	none

The listing 5.1 provides the Messir (MCL-oriented) specification of the operation.

```
1
2 /* Pre Protocol:*/
3 preP{let TheSystem: ctState in
```

```
 let AvpStarted: ptBoolean in

/* PreP01 */
 self.rnActor.rnSystem = TheSystem
 and self.rnActor.rnSystem.vpStarted = AvpStarted
 and AvpStarted = true
 and TheSystem.clock.lt(AcurrentClock)}

/* Pre Functional:*/
preF{true}

/* Post Functional:*/
postF{let TheSystem: ctState in
 self.rnActor.rnSystem = TheSystem

/* PostF01 */
 and TheSystem@post.clock = AcurrentClock}

/* Post Protocol:*/
postP{ true}
```

Listing 5.1: Messir (MCL-oriented) specification of the operation *oeSetClock*.

The listing 5.2 provides the Messir (Prolog-oriented) implementation of the operation.

Listing 5.2: Messir (Prolog-oriented) implementation of the operation *oeSetClock*.

5.1.2 Operation Model for oeSollicitateCrisisHandling

The `oeSollicitateCrisisHandling` operation has the following properties:

Operation	
oeSollicitateCrisisHandling[proactive] A proactive message (message of a pro-active actor with no parameter triggered automatically if the pre protocol condition is true) used to avoid crisis to stay too long in an not handled status.	
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	there exist some crisis that are in pending status and for which the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration.
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	if there exist coordinators and crisis who stood in a not handled status more than the maximum allowed time then those crisis are randomly allocated to the existing coordinators.
PostF 2	for all other crisis who stood too longly in a not handled status but not more than the maximum delay allowed then a reminder message is sent to the administrator and all coordinator actors of the environment to sollicitate handling of those crisis.
Post-Condition (protocol)	
PostP 1	the value of the last reminder known by the system at post state is the system's clock value.

The listing 5.3 provides the Messir (MCL-oriented) specification of the operation.

```

5.2.1 Operation Model for oeAddCoordinator

The `oeAddCoordinator` operation has the following properties:

OPERATION	
oeAddCoordinator	
sent to add a new coordinator in the system's post state and environment's post state.	
Parameters	
1	**AdtCoordinatorID: dtCoordinatorID** used to initialize the id field
2	**AdtLogin: dtLogin** used to initialize the login field
3	**AdtPassword: dtPassword** used to initialize the password field
Return type	
ptBoolean	
Pre-Condition (protocol)	

continues in next page . . .

. . . Operation table continuation

PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there cannot exist a ctCoordinator instance with the same `id` attribute as the one the administrator wants to delete.
Post-Condition (functional)	
PostF 1	the environment has a new instance of coordinator actor allowing for input/output message communication with the system.
PostF 2	the system's state has a new instance of ctCoordinator initialized with the given values.
PostF 3	the new actor instance and ctCoordinator instance are related.
PostF 4	the new actor instance and ctCoordinator instance are related according to the authenticated association.
PostF 5	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

The listing 5.5 provides the Messir (MCL-oriented) specification of the operation.

5.2.2 Operation Model for oeDeleteCoordinator

The `oeDeleteCoordinator` operation has the following properties:

Operation
oeDeleteCoordinator
sent to delete an existing coordinator in the system's post state and environment's post state.

continues in next page . . .

. . . Operation table continuation

Parameters	
1	**AdtCoordinatorID: dtCoordinatorID** used for ctCoordinator instance retrieval
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctCoordinator instance with the same `id` attribute than the one the administrator wants to create.
Post-Condition (functional)	
PostF 1	the ctCoordinator class instance having the required id do not belong anymore to the post state as well as is related actCoordinator actor instance.
PostF 2	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

The listing 5.7 provides the Messir (MCL-oriented) specification of the operation.

5.2.3 Operation Model for oeEditCoordinator

The `oeEditCoordinator` operation has the following properties:

OPERATION	
oeEditCoordinator	
sent to edit an existing coordinator in the system's post state and environment's post state.	
Parameters	
1	**AdtCoordinatorID: dtCoordinatorID** used for ctCoordinator instance retrieval
2	**AetGeoraphicalLocation: etGeographicalLocation** the parameter to which current geographical location of coordinator will be changed
3	**AetCrisisType: etCrisisType** the parameter to which current crisis type of coordinator will be changed
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)

continues in next page . . .

... Operation table continuation

PreP 3	the coordinator with the given ID is not logged in. It means that vpIsLogged of the coordinator is false
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctCoordinator instance with the same `id` attribute than the one the administrator wants to edit.
Post-Condition (functional)	
PostF 1	the ctCoordinator class instance having the required id now has updated geographical location and crisis type .
PostF 2	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

5.3 Environment - Out Interface Operation Scheme for actAuthenticated

5.3.1 Operation Model for oeLogin

The `oeLogin` operation has the following properties:

OPERATION	
oeLogin sent to request authorization to request access secured system operations.	
Parameters	
1	**AdtLogin: dtLogin** first information used to determine accessibility rights for the actual actor.
2	**AdtPassword: dtPassword** second information used to determine accessibility rights for the actual actor.
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is not already logged in ! (i.e. the associated ctAuthenticated instance is not considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	if the login and password provided by the actor correspond to the ones that belong to the ctAuthenticated instance he is related to then a message telling the user that password and login are correct is sent to the actor.; else the actor is notified that he gave incorrect data and all the administrator actors existing in the environement are notified of an intrusion temptative.
Post-Condition (protocol)	
PostP 1	if the authentication information is correct then a code is generated and is sent to phone number of the actor.
PostP 2	

The listing 5.9 provides the Messir (MCL-oriented) specification of the operation.

```

/* Pre Protocol:*/

5.3.2 Operation Model for oeSMS

The `oeSMS` operation has the following properties:

OPERATION	
oeSMS	
sent to request authorization to request access secured system operations.	
Parameters	
1	**AdtString: dtString**
	string which contains the code which will be compared with the one generated for authenticated user
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is not already logged in ! (i.e. the associated ctAuthenticated instance is not considered logged)
PreP 3	the actor's method oeLogin is executed and variable vpIsLoggedStep1 = true

continues in next page . . .

... Operation table continuation

PreP 4	the actor has resived sms code on his telephone
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	if the sms code provided by the actor correspond to the ones that belong to the ctAuthenticated instance he is related to then a welcome message is sent to the actor (n.b. the logged status is changed as a post-protocol condition).
Post-Condition (protocol)	
PostP 1	if the sms code is correct then the actor is known to be logged in ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged)

The listing 5.11 provides the Messir (MCL-oriented) specification of the operation.

```

```
45  endif}
```

Listing 5.11: Messir (MCL-oriented) specification of the operation *oeSMS*.

5.3.3 Operation Model for oeLogout

The `oeLogout` operation has the following properties:

OPERATION	
oeLogout sent to end the secured access to specific system operations.	
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is currently logged in ! (i.e. the associated ctAuthenticated instance is considered logged)
Pre-Condition (functional)	
PreF 1	
Post-Condition (functional)	
PostF 1	a logout confirmation message is sent to the actor (n.b. the logged status is changed as a post-protocol condition)
Post-Condition (protocol)	
PostP 1	the actor is known to be logged out ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged out)

The listing 5.12 provides the Messir (MCL-oriented) specification of the operation.

```

5.4 Environment - Out Interface Operation Scheme for actComCompany

5.4.1 Operation Model for oeAlert

The `oeAlert` operation has the following properties:

OPERATION	
oeAlert	
Any human having a phone able to connect to the communication companies using the *iCrash* system can send his company an sms message with structured information in order to declare an alert.	
Parameters	
1	**AetHumanKind: etHumanKind** the kind of human informing of an alert.
2	**AdtDate: dtDate** the date of the alert
3	**AdtTime: dtTime** the time of the alert
4	**AdtPhoneNumber: dtPhoneNumber** the phone number of the human sending the alert SMS message
5	**AdtGPSLocation: dtGPSLocation** the GPS position of the phone at the date and time the message was sent.
6	**AdtComment: dtComment** a free text message sent by the human providing information on the alert that he wants to declare
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is supposed to be created and initialized.
Pre-Condition (functional)	
PreF 1	the date and time the alert is declared is supposed to be in the past with respect to the current time known by the system.
Post-Condition (functional)	
PostF 1	the ctState attribute for the next value for alert IDs is incremented by one at post.

continues in next page . . .

... Operation table continuation

PostF 2	a new alert instance exists in the post state with status pending, instant information (resp. GPS location and comment) based on date and time provided (resp. position and comment); and with alert ID being a string conversion of the dtInteger value available in the pre state in the ctState instance.
PostF 3	if there exist no already registered alert near to the alert currently declared then a new crisis is added in the post state and initialized with: its ID being the one provided by the ctState instance (which is incremented by one in the post state), its type considered as small, its status being pending, its declared time being the same than the alert and a default comment indicating that a report will come later on. else the crisis to which the new alert must be related to is the one related to any alert nearby in the pre-state.
PostF 4	the post state relates the new alert to the previously characterized crisis.
PostF 5	if there is no ctHuman instance having same phone number and same kind in the pre-state then a new one is added in the post-state with given phone number and kind and is associated to the communication company actor used to declare the alert. else the pre-state one is chosen
PostF 6	and this specified ctHuman is related to the new alert thus indicating he has signled the alert.
Post-Condition (protocol)	
PostP 1	none

The listing 5.14 provides the Messir (MCL-oriented) specification of the operation.

5.5 Environment - Out Interface Operation Scheme for actCoordinator

5.5.1 Operation Model for oeCloseCrisis

The `oeCloseCrisis` operation has the following properties:

OPERATION	
oeCloseCrisis	
sent to indicate that a crisis should be considered as closed.	
Parameters	
1	**AdtCrisisID: dtCrisisID** the identification information used to determine the crisis to close
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctCrisis instance with the same `id` attribute value as the one provided by the coordinator actor who wants to close.
Post-Condition (functional)	
PostF 1	the ctCrisis class instance having the provided id is considered closed in the post state.
PostF 2	There is no handler declared in the system as associated to the crisis.
PostF 3	all the alert instances associated to this crisis do not belong any more to the system's post state.
PostF 4	the coordinator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

The listing 5.16 provides the Messir (Prolog-oriented) implementation of the operation.

5.5.2 Operation Model for oeGetAlertsSet

The `oeGetAlertsSet` operation has the following properties:

OPERATION	
oeGetAlertsSet	
sent to request all the ctAlert instances having a specific status, crisis Type and geographical location.	
Parameters	
1	**AetAlertStatus: etAlertStatus** the criteria used to select the alerts to send back to the actor
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the post state is the one obtained by satisfying the `isSentToCoordinator` predicate for each alert having the provided status,same crisis type and geographical location as ctCoordinator has, and for the actor sending the message. (cf. specification of `isSentToCoordinator` predicate given for the `ctAlert` type.
Post-Condition (protocol)	
PostP 1	none

The listing 5.17 provides the Messir (Prolog-oriented) implementation of the operation.

5.5.3 Operation Model for oeGetCrisisSet

The `oeGetCrisisSet` operation has the following properties:

OPERATION	
oeGetCrisisSet	
sent to request all the ctCrisis instances having a specific status, crisis type and geographical location .	
Parameters	
1	**AetCrisisStatus: etCrisisStatus** the status information used to determine the crisis to send back to the actor
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the post state is the one obtained by satisfying the `isSentToCoordinator` predicate for each crisis having the provided status, same crisis type and geographical location as ctCoordinator has, and for the actor sending the message `ieSendACrisis`. (cf. specification of `isSentToCoordinator` predicate given for the `ctCrisis` type.
Post-Condition (protocol)	
PostP 1	none

The listing 5.18 provides the Messir (Prolog-oriented) implementation of the operation.

Listing 5.18: Messir (Prolog-oriented) implementation of the operation *oeGetCrisisSet*.

5.5.4 Operation Model for oeInvalidateAlert

The `oeInvalidateAlert` operation has the following properties:

Operation	
oeInvalidateAlert sent to indicate that an alert should be considered as closed.	
Parameters	
1	**AdtAlertID: dtAlertID** the identification information used to determine the alert to close
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctAlert instance with the same `id` attribute value as the one provided by the coordinator actor who wants to close.
Post-Condition (functional)	

continues in next page . . .

. . . Operation table continuation

PostF 1	the ctAlert class instance having the provided id is considered closed in the post state.
PostF 2	the coordinator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

The listing 5.19 provides the MESSIR (Prolog-oriented) implementation of the operation.

5.5.5 Operation Model for oeReportOnCrisis

The `oeReportOnCrisis` operation has the following properties:

OPERATION	
oeReportOnCrisis	
sent to update the textual information available for a specific handled crisis.	
Parameters	
1	**AdtCrisisID: dtCrisisID** the identification information used to determine the crisis to report on
2	**AdtComment: dtComment** the textual information commenting the crisis
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)

continues in next page . . .

... Operation table continuation

Pre-Condition (functional)	
PreF 1	it is supposed that there exist one crisis in the pre state having the given id.
Post-Condition (functional)	
PostF 1	the comment attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update.
Post-Condition (protocol)	
PostP 1	none

The listing 5.20 provides the Messir (Prolog-oriented) implementation of the operation.

5.5.6 Operation Model for oeSetCrisisHandler

The `oeSetCrisisHandler` operation has the following properties:

OPERATION	
oeSetCrisisHandler	
sent to declare himself as been the handler of a crisis having the specified id.	
Parameters	
1	**AdtCrisisID: dtCrisisID**
	the identification information used to determine the crisis
Return type	
ptBoolean	
Pre-Condition (protocol)	

continues in next page . . .

... Operation table continuation

PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	there exist one crisis having the given id in the pre-state.
Post-Condition (functional)	
PostF 1	the ctCrisis instance having the provided id is in handled status at poststate and is associated to the actor that sends the message (which himself is notified with a textual message as confirmation).
PostF 2	All the alerts related to this crisis are sent to the actor such that he can decide how to handle them.
PostF 3	if the crisis was already handled at pre-sate then the associated handler actor is notified about the change of handler for one of his crisis (n.b. it might be the same even if not relevant).
PostF 4	a message is sent to the communication company for any human related to an alert associated to the crisis. A human will receive as many messages as alerts he sent despite the fact that they might relate to the same crisis (i.e. one alert, one acknoledgement).
Post-Condition (protocol)	
PostP 1	none

The listing 5.21 provides the Messir (Prolog-oriented) implementation of the operation.

5.6 Environment - Out Interface Operation Scheme for actMsrCreator

5.6.1 Operation Model for oeCreateSystemAndEnvironment

The `oeCreateSystemAndEnvironment` operation has the following properties:

OPERATION	
oeCreateSystemAndEnvironment sent to request the initialization of the system's class instances and the environment actors instances.	
Parameters	
1	**AqtyComCompanies: ptInteger** the quantity of communication companies to create in the environment
Return type	
ptBoolean	
Pre-Condition (protocol)	

continues in next page . . .

... Operation table continuation

PreP 1	none
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the ctState instance is initialized with the integer 1 for the crisis and alert counters used for their identifications, a value for the clock corresponding to a default inital time (i.e. January 1st, 1970) the crisis reminder period is set to 300 seconds, the maximum crisis reminder period is fixed to 1200 seconds (i.e. 20 minutes), an initial value for the automatic reminder period equal to the current date and time and the system is considered in a started state. **Those predicates must be satisfied first since all the other depend on the existence of a ctState instance !**
PostF 2	the `actMsrCreator` actor instance is initiated (remember that since the `oeCreateSystemAndEnvironment` is a special event it role is to make consistent the post state thus creating the actor and its interfaces is required even though the sending of this message logically would need the actor and its interfaces to already exist ...).
PostF 3	the environment for communication company actors, in the post state, is made of `AqtyComCompanies` instances allowing for receiving and sending messages to humans.
PostF 4	the environment for administrator actors, in the post state, is made of one instance.
PostF 5	the environment for activator actors, in the post state, is made of one instance allowing for automatic message sending based on current system's and environment state'.
PostF 6	the set of ctAdministrator instances at post is made of one instance initialized with 'icrashadmin' (resp. '7WXC1359') for login (resp. password) values.
PostF 7	the association between ctAdministrator and actAdministrator is made of one couple made of the conjointly specified instances.
Post-Condition (protocol)	
PostP 1	none is given since the only protocol variable to be modified in the post state is the one initialized with the ctState instance (i.e. vpStarted).

The listing 5.25 provides the Messir (MCL-oriented) specification of the operation.

Figure 5.4 shows all the concept model elements in the scope of the oeCreateSystemAndEnvironment operation

5.7 Environment - Actor Operation Scheme for actMsrCreator

5.7.1 Operation Model for init

The `init` operation has the following properties:

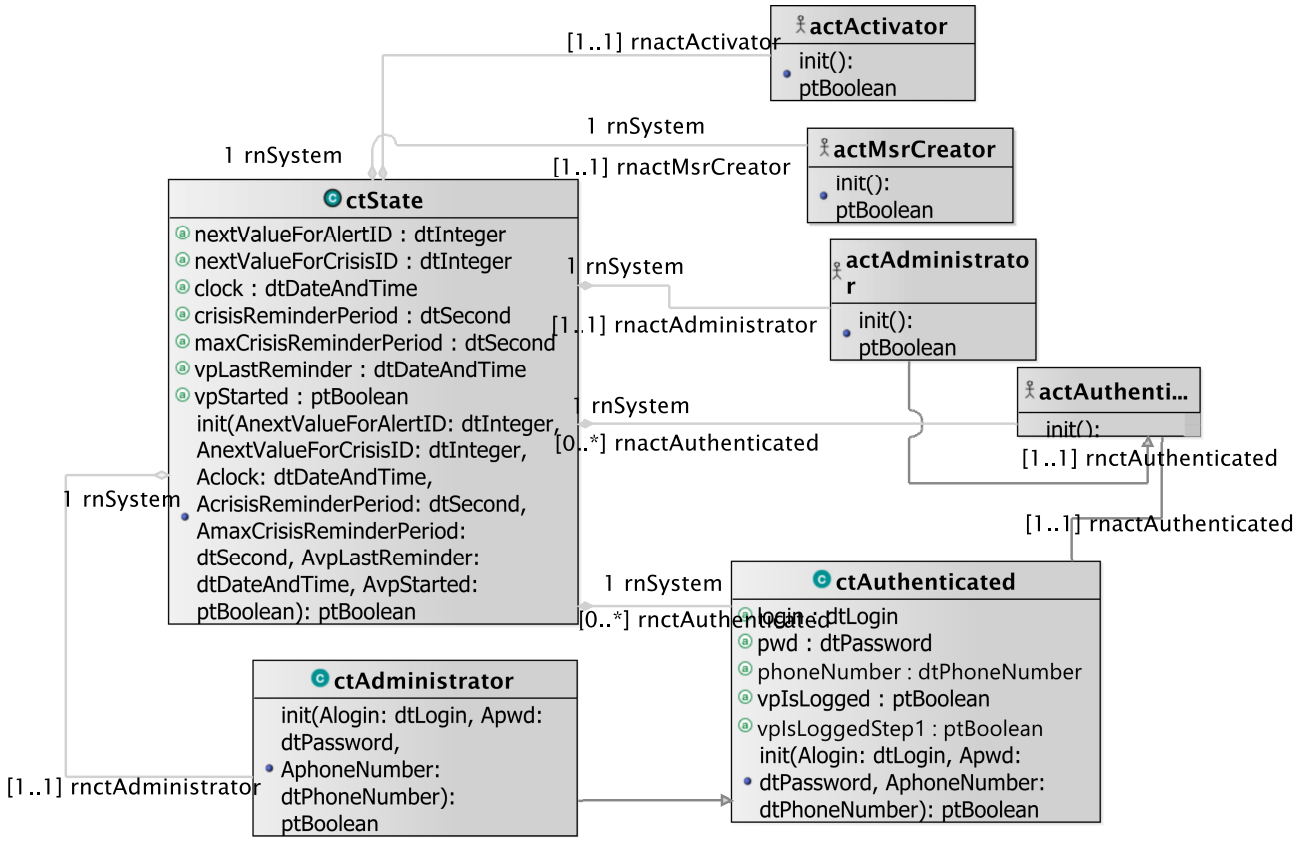

Figure 5.4: oeCreateSystemAndEnvironment operation scope

Operation
init
used to create an instance of the actor together with its interface instances and update the assocations with the `ctState` instance.
Return type
ptBoolean

5.8 Primary Types - Operation Schemes for Class ctAdministrator

5.8.1 Operation Model for init

The `init` operation has the following properties:

Operation	
init	
used to initialize the current object as a new instance of the ctAdministrator type.	
Parameters	
1	**Alogin: dtLogin** used to initialize the login field
2	**Apwd: dtPassword** used to initialize the password field
3	**AphoneNumber: dtPhoneNumber** used to initialize the phone numberfield
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the system poststate includes the current object as a new ctAdministrator instance having its login and password attributes equal to the one provided as parameters and its vpIsLogged attribute equal to false.

The listing 5.27 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  let Self:ctAdministrator in
6  /* Post F01 */
7  Self.login(Alogin)
8  and Self.pwd = Apwd
9  and Self.phoneNumber = AphoneNumber
10 and Self.vpIsLogged = false
11
12 /* Post F02 */
13 and (Self.oclIsNew and self = Self)
14 )
15 then (result = true)
16 else (result = false)
17 endif}
```

5.9 Primary Types - Operation Schemes for Class ctAlert

5.9.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
init	
used to initialize the current object as a new instance of the ctAlert type.	
Parameters	
1	**Aid: dtAlertID** used to initialize the id field
2	**Astatus: etAlertStatus** used to initialize the status field
3	**Alocation: dtGPSLocation** used to initialize the location field
4	**Ainstant: dtDateAndTime** used to initialize the instant field
5	**Acomment: dtComment** used to initialize the comment field
6	**AcrisisType: etCrisisType** used to initialize the type of the crisis
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the system poststate includes the current object as a new ctAlert instance having its attributes equal to the ones provided as parameters.

The listing 5.29 provides the Messiр (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/

5.9.2 Operation Model for isSentToCoordinator

The `isSentToCoordinator` operation has the following properties:

OPERATION	
isSentToCoordinator	
used to provide a given coordinator with current alert information.	
Parameters	
1	**AactCoordinator: actCoordinator** the message destination
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the message ieSendAnAlert is sent to the input interface of the given coordinator actor with the current alert as parameter value.

The listing 5.31 provides the Messir (MCL-oriented) specification of the operation.

```

5.10 Primary Types - Operation Schemes for Class ctAuthenticated

5.10.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
init	
used to initialize the current object as a new instance of the ctAuthenticated type.	
Parameters	
1	**Alogin: dtLogin** used to initialize the login field
2	**Apwd: dtPassword** used to initialize the password field
3	**AphoneNumber: dtPhoneNumber** used to initialize the phone number field
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the system poststate includes the current object as a new ctAuthenticated instance having its attributes equal to the ones provided as parameters.

The listing 5.33 provides the MessIP (Prolog-oriented) implementation of the operation.

```

5.12.4 Operation Model for isSentToCoordinator

The `isSentToCoordinator` operation has the following properties:

Operation
isSentToCoordinator   used to provide a given coordinator with current crisis information.
Parameters
1 **AactCoordinator: actCoordinator**   the message destination actor
Return type
ptBoolean
Post-Condition (functional)

continues in next page . . .

. . . Operation table continuation

PostF 1	true iff the message ieSendACrisis is sent by the simulator to the input interface of the given coordinator actor with the current crisis as parameter value.

The listing 5.42 provides the Messir (MCL-oriented) specification of the operation.

```
1
2 /* Post Functional:*/
3 postF{if
4 (
5 /* Post F01 */

Listing 5.59: Messir (Prolog-oriented) implementation of the operation *is*.

5.20 Primary Types - Operation Schemes for Datatype dtGPSLocation

5.20.1 Operation Model for getGeographicalLocation

The `getGeographicalLocation` operation has the following properties:

Operation	
getGeographicalLocation	
method which defines if the given geographical location equals to the crisis/alert georaphical location	
Parameters	
1	**EtGeographicalLocation: etGeographicalLocation**
	the given geographical location of a coodrdinator expertise domaine
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	according to distance between the center of the current city(Saint-Petersburg) and coordinate which is measured with the help of latitude and longitude the method defines the geographical location of a crisis or an alert. Then this geographical location is compared with the given geograpical location

5.20.2 Operation Model for is

The `is` operation has the following properties:

Operation	
is	
used to determine which couples are considered as valid dtGPSLocation values.	
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true if both latitude and longitude are valid values according to their is operation.

The listing 5.60 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4       ( if
5        ( AdtValue.latitude.is()
6         and AdtValue.longitude.is
7        )
8        then (TheResult = true)
9        else (TheResult = false)
10       endif
11       result = TheResult
12      )}
```

Listing 5.61: Messir (Prolog-oriented) implementation of the operation *is*.

5.20.3 Operation Model for isNearTo

The `isNearTo` operation has the following properties:

OPERATION
isNearTo   used to determine if locations are considered enough close to be treated as equivalent in the application domain context. In the context of the iCrash system, we compute the distance between two GPS locations using the following Haversine formula. (more details can be found at: http://www.movable-type.co.uk/scripts/latlong.html and http://www.gpsvisualizer.com/calculators#distance)
Parameters
1 **AGPSLocation: dtGPSLocation**   the GPS location to be compared to.

continues in next page . . .

... Operation table continuation

Return type
ptBoolean
Post-Condition (functional)
PostF 1 if the Haversine formula (ACOS(SIN(lat1)*SIN(lat2)+COS(lat1)*COS(lat2)*COS(lon2-lon1))*6371, in which latitudes and longitudes are in radiansapplied to the two dtGPS coordinates is lower to 100 meters) then the predicate is true and false otherwise.

The listing 5.62 provides the Messir (MCL-oriented) specification of the operation.

5.30 Primary Types - Operation Schemes for Enumeration etHumanKind

5.30.1 Operation Model for is

The `is` operation has the following properties:

Operation	
is used to determine which litteral belongs to the enumeration.	
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the value is equal to one of the following values: `witness,victim,anonym`

The listing 5.81 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self = witness
6        or self = victim
7        or self = anonymous
8       )
9       then (TheResult = true)
10      else (TheResult = false)
```

```
11       endif
12       result = TheResult
13      )}
```

Chapter 6

Test Model(s)

6.1 Test Model for testcase01

this positive test case intends to verify the correctness of the execution of a simple instance of the `suDeployAndRun` use case.

6.1.1 Test Steps Specification

6.1.1.1 testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreateSy

The `testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreat` has the following properties:

Test Step	
ts01oeCreateSystemAndEnvironment This test step initializes the system state and environment.	
Test Sent Message	
TSM 1	**out:Creator** **sends to system** **actMsrCreator.outactMsrCreator.oeCreateSystemAndEnvironment (AqtyComCompanies)**
Variables	
V 1	**Creator:icrash.environment.actMsrCreator** only actMsrtCreator actors can trigger the system and environment creation and initialization.
Constraints	
C 1	the number of communication company actor instances present in the environment is equal to four to represent all the communication companies available in Luxembourg.
Oracle Constraints	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

The listing 6.1 provides the Messir (MCL-oriented) specification of the test step.

6.1.1.2 testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock

The `testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock` has the following properties:

Test Step	
ts02oeSetClock test the update of the current time.	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actActivator.outactActivator.oeSetClock (ACurrentClock)**
Variables	
V 1	**TheActor:actActivator** proactive actor responsible of requesting the update of the system's clock.
Constraints	
C 1 C 2	TheActor is any instance existing in the current environment status. ACurrentClock is a fixed date equal to the 24th November 2017 at 15:20:00 using a 24-hours notation [1].
Oracle Constraints	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

The listing 6.3 provides the Messir (MCL-oriented) specification of the test step.

[1]- Information interchange -

```
1
2  variables{

```

Listing 6.3: Messir (MCL-oriented) specification of the test step *testcase01-ts02oeSetClock*.

6.1.1.3 testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin

The `testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin` has the following properties:

Test Step	
ts03oeLogin test the authentified access of the administrator	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actAdministrator.outactAdministrator.oeLogin (AdtLogin, AdtPassword)**
Variables	
V 1	**TheActor:actAdministrator** an actAdministor actor as subtype of actAuthenticated can send oeLogin messages to the system.
Constraints	
C 1	TheActor is any `actAdministrator` instance existing in the environment. It is thus expected that there exist at least one.
C 2	AdtLogin has its value attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.)
C 3	AdtPassword has its value attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.)
Oracle Constraints	
OC 1	the `AMessage` value is expected to be equal to the primitive string 'You are logged ! Welcome ...'
OC 2	TheActor receives from system ieMessage(AMessage)

The listing 6.4 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actAdministrator
4   AdtLogin:dtLogin
5   AdtPassword:dtPassword
6  }
7
8  constraints{
9   TheActor=TheSystem.rnactAdministrator->any2(true)
10  AdtLogin.value.eq('icrashadmin')
11  AdtPassword.value.eq('7WXC1359')
12 }
13
14 oracle{
15  variables{
16   AMessage:ptString

19   AMessage = 'You are logged ! Welcome ...'
20   TheActor.inactAdministrator.ieMessage(AMessage)
21  }
22 }
```

Listing 6.4: Messir (MCL-oriented) specification of the test step *testcase01-ts03oeLogin*.

6.1.1.4 testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordinator

The `testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordina` has the following properties:

Test Step	
ts04oeAddCoordinator to test the add of a new coordinator by an administrator.	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actAdministrator.outactAdministrator.oeAddCoordinator (AdtCoordinatorID, AdtLogin, AdtPassword)**
Variables	
V 1	**TheActor:actAdministrator** actAdministor actors as being the only one allowed to add coordinators.
Constraints	
C 1	TheActor is any `actAdministrator` instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
C 2	AdtCoordinatorID is equal to 1 to set the new coordinator ID
C 3	AdtLogin has its value attribute equal to the primitive string 'steve' which is the ID defined for the new coordinator.
C 4	AdtPassword has its value attribute equal to the primitive string 'pwdMessirExcalibur2017' which is the password to be set for steve.
Oracle Constraints	

continues in next page . . .

. . . Test Step table continuation

OC 1	the administrator should have been acknowledged for the adding of the new coordinator.

The listing 6.5 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actAdministrator
4   AdtCoordinatorID : dtCoordinatorID
5   AdtLogin:dtLogin
6   AdtPassword:dtPassword
7  }
8
9  constraints{
10  TheActor = TheSystem.rnactAdministrator->any2(true)
11  AdtCoordinatorID.value.eq('1')
12  AdtLogin.value.eq('steve')
13  AdtPassword.value.eq('pwdMessirExcalibur2017')
14 }

6.1.1.5 testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout

The `testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout` has the following properties:

Test Step	
ts05oeLogout to test the loggout of a connected administrator.	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actAdministrator.outactAdministrator.oeLogout** ()
Variables	
V 1	**TheActor:actAdministrator** an actAdministor actor as subtype of actAuthenticated can send oeLogout messages to the system.
Constraints	
C 1	TheActor is any `actAdministrator` instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
Oracle Constraints	

continues in next page . . .

... Test Step table continuation

OC 1	the `AMessage` value is expected to be equal to the primitive string 'You are logged out ! Good Bye ...'
OC 2	the administrator should have received the messahe AMessage.

The listing 6.6 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actAdministrator
4  }
5
6  constraints{
7   TheActor = TheSystem.rnactAdministrator->any2(true)
8  }

13  }
14  constraints{
15   AMessage = 'You are logged out ! Good Bye ...'
16   TheActor.inactAdministrator.ieMessage(AMessage)
17  }
18 }
```

Listing 6.6: Messir (MCL-oriented) specification of the test step *testcase01-ts05oeLogout*.

6.1.1.6 testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock

The `testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock` has the following properties:

Test Step	
ts06oeSetClock02 test the update of the current time.	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actActivator.outactActivator.oeSetClock (ACurrentClock)**
Variables	
V 1	**TheActor:icrash.environment.actActivator** proactive actors responsible of requesting the update of the system's clock.
Constraints	
C 1 C 2	TheActor is any instance existing in the current environment status. ACurrentClock is a fixed date equal to the 26th November 2017 at 10:15:00 using a 24-hours notation.
Oracle Constraints	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

The listing 6.7 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 26
12  ACurrentClock.time.hour.value = 10
13  ACurrentClock.time.minute.value = 15
14  ACurrentClock.time.second.value = 00
15 }
16
17 oracle{
18  constraints{
19   true
20  }
21 }
```

Listing 6.7: Messir (MCL-oriented) specification of the test step *testcase01-ts06oeSetClock02*.

6.1.1.7 testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert

The `testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert` has the following properties:

Test Step	
ts07oeAlert1 tests the declaration of a new alert functionality.	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actComCompany.outactComCompany.oeAlert (AetHumanKind, AdtDate, AdtTime, AdtPhoneNumber, AdtGPSLocation, AdtComment)**
Variables	
V 1	**TheActor:actComCompany** actComCompany actors transfer alert declaration messages.
Constraints	
C 1	TheActor is any instance existing in the current environment status. It is expected to exist at least one.
C 2	AetHumanKind is equal to witness
C 3	AdtDate is equal to the 26th of November 2017
C 4	AdtTime is equal to 10:10:16 using a 24-hours.
C 5	AdtPhoneNumber is equal to the ptString value '+3524666445252'.
C 6	AdtGPSLocation is equal to (49.627675 , 6.159590).
C 7	AdtComment is equal to '3 cars involved in an accident.'

continues in next page . . .

... Test Step table continuation

Oracle Constraints	
OC 1	AdtSMS is equal to the ptString 'Your alert has been registered. We will handle it and keep you informed'.
OC 2	AdtSMS is sent to the phone number AdtPhoneNumber using the communication company having sent the alert using its ieSmsSend input message.

The listing 6.8 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actComCompany

6.1.1.9 testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSollicitateCrisis

The `testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSoll` has the following properties:

TEST STEP
ts09oeSollicitateCrisisHandling test the proactive sollication to handle an alert.
Test Sent Message

continues in next page ...

. . . Test Step table continuation

TSM 1	**out:TheActor** **sends to system** **actActivator.outactActivator.oeSollicitateCrisisHandling** ()
Variables	
V 1	**TheActor:icrash.environment.actActivator** proactive actor responsible of triggering sollicitation functionality.
Constraints	
C 1	TheActor is any instance existing in the current environment status. It is expected to exist at least one.
Oracle Variables	
OV 1	**TheAdministrator:actAdministrator** actAdministrator actors can be sollicitated to handle alerts.
OV 2	**TheCoordinator:actCoordinator** actCoordinator actors can be sollicitated to handle alerts.
OV 3	**AMessageForCrisisHandlers:ptString** messages sent to sollicitated actors are of type ptString.
Oracle Constraints	
OC 1	TheAdministrator is any instance existing in the current environment status. It is expected to exist at least one.
OC 2	TheCoordinator is any instance existing in the current environment status. It is expected to exist at least one.
OC 3	AMessageForCrisisHandlers is equal to the ptString 'There are alerts pending since more than the defined delay. Please REACT !'
OC 4	TheCoordinator and TheAdministrator have received the message AMessageForCrisisHandlers.

The listing 6.10 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actActivator
4  }
5
6  constraints{
7   TheActor = TheSystem.rnactActivator->any2(true)
8  }

Listing 6.11: Messir (MCL-oriented) specification of the test step *testcase01-ts10oeLogin02*.

6.1.1.11 testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet

The `testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet` has the following properties:

Test Step	
ts11oeGetCrisisSet cf. actor documentation	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actCoordinator.outactCoordinator.oeGetCrisisSet (AetCrisisStatus)**
Variables	
V 1	**TheActor:icrash.environment.actCoordinator** cf. actor documentation
V 2	**AetCrisisStatus:icrash.concepts.primarytypes.datatypes.etCrisisStatus** cf. actor documentation
V 3	**ActCrisis:icrash.concepts.primarytypes.classes.ctCrisis** cf. actor documentation
Constraints	
C 1	TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value
C 2	AetCrisisStatus value is pending
Oracle Constraints	
OC 1	ActCrisis is any ctCrisis instance that has been sent to TheActor.

The listing 6.12 provides the Messir (MCL-oriented) specification of the test step.

```
1
2 variables{
3  TheActor : actCoordinator
4  AetCrisisStatus : etCrisisStatus
5 }
6
7 constraints{
```

```
 8   TheActor=TheSystem.rnactCoordinator
 9         ->select(a | a.rnctCoordinator.login.value.eq('steve'))
10         ->any2(true)
11   AetCrisisStatus = pending
12  }
13
14  oracle{
15   variables{

6.1.1.12 testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisisHandle

The `testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisis` has the following properties:

Test Step	
ts12oeSetCrisisHandler cf. actor documentation	
Test Sent Message	
TSM 1	**out:TheActor** **sends to system** **actCoordinator.outactCoordinator.oeSetCrisisHandler (AdtCrisisID)**
Variables	
V 1	**TheActor:icrash.environment.actCoordinator** cf. actor documentation
V 2	**TheComCompany:icrash.environment.actComCompany** cf. actor documentation
V 3	**TheCoordinator:icrash.environment.actCoordinator** cf. actor documentation
V 4	**AdtCrisisID:icrash.concepts.primarytypes.datatypes.dtCrisisID** cf. actor documentation
V 5	**AMessage:lu.uni.lassy.messir.libraries.primitives.ptString** cf. actor documentation
V 6	**AdtPhoneNumber:icrash.concepts.primarytypes.datatypes.dtPhoneNumber** cf. actor documentation
V 7	**AdtSMS:icrash.concepts.secondarytypes.datatypes.dtSMS** cf. actor documentation
V 8	**ActAlert:icrash.concepts.primarytypes.classes.ctAlert** cf. actor documentation
Constraints	
C 1	TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value
C 2	AdtCrisisID as a value of 1

continues in next page . . .

... Test Step table continuation

C 3	AMessage is the string 'You are now considered as handling the crisis !'
C 4	AdtPhoneNumber
C 5	AdtSMS has for value the string 'The handling of your alert by our services is in progress !'
Oracle Constraints	
OC 1	there is a communication company actor that received the message ieSmsSend(AdtPhoneNumber,AdtSMS)
OC 2	there is a coordinator actor that received an alert using the message ieSendAnAlert(ActAlert)

The listing 6.13 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actCoordinator
4   AdtCrisisID : dtCrisisID
5  }

Chapter 7

Additional Constraints

7.1 Quality Constraints

Description of all the constraints that concern the required quality criteria according to their ISO definition [**?**].

7.1.1 Functional suitability

Constraints on the degree to which the product provides functions that meet stated and implied needs when the product is used under specified conditions.

7.1.1.1 Functional completeness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.2 Functional correctness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.3 Functional appropriateness

List of requirements on the degree to which the functions facilitate the accomplishment of specified tasks and objectives.

1. (to be filled)

7.1.2 Performance efficiency

Constraints on the performance relative to the amount of resources used under stated conditions

7.1.2.1 Time behaviour

List of requirements on the degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.2 Resource utilization

List of requirements on the degree to which the amounts and types of resources used by a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.3 Capacity

List of requirements on the degree to which the maximum limits of a product or system parameter meet requirements.

1. (to be filled)

7.1.3 Compatibility

Constraints on the degree to which a product, system or component can exchange information with other products, systems or components, and/or perform its required functions, while sharing the same hardware or software environment.

7.1.3.1 Co-existence

List of requirements on the degree to which a product can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.

1. (to be filled)

7.1.3.2 Interoperability

List of requirements on the degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.

1. (to be filled)

7.1.4 Usability

Constraints on the usability degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

7.1.4.1 Appropriateness recognizability

List of requirements on the degree to which users can recognize whether a product or system is appropriate for their needs.

1. (to be filled)

7.1.4.2 Learnability

List of requirements on the degree to which a product or system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.

1. (to be filled)

7.1.4.3 Operability

List of requirements on the degree to which a product or system has attributes that make it easy to operate and control.

1. (to be filled)

7.1.4.4 User error protection

List of requirements on the degree to which a system protects users against making errors.

1. (to be filled)

7.1.4.5 User interface aesthetics

List of requirements on the degree to which a user interface enables pleasing and satisfying interaction for the user.

1. (to be filled)

7.1.4.6 Accessibility

List of requirements on the degree to which a product or system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.

1. (to be filled)

7.1.5 Reliability

Contraints on the degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

7.1.5.1 Maturity

List of requirements on the degree to which a system, product or component meets needs for reliability under normal operation.

1. (to be filled)

7.1.5.2 Availability

List of requirements on the degree to which a system, product or component is operational and accessible when required for use.

1. (to be filled)

7.1.5.3 Fault tolerance

List of requirements on the degree to which a system, product or component operates as intended despite the presence of hardware or software faults.

1. (to be filled)

7.1.5.4 Recoverability

List of requirements on the degree to which, in the event of an interruption or a failure, a product or system can recover the data directly affected and re-establish the desired state of the system.

1. (to be filled)

7.1.6 Security

Contraints on the degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

7.1.6.1 Confidentiality

List of requirements on the degree to which a product or system ensures that data are accessible only to those authorized to have access.

1. (to be filled)

7.1.6.2 Integrity

List of requirements on the degree to which a system, product or component prevents unauthorized access to, or modification of, computer programs or data.

1. (to be filled)

7.1.6.3 Non-repudiation

List of requirements on the degree to which actions or events can be proven to have taken place, so that the events or actions cannot be repudiated later.

1. (to be filled)

7.1.6.4 Accountability

List of requirements on the degree to which the actions of an entity can be traced uniquely to the entity.

1. (to be filled)

7.1.6.5 Authenticity

List of requirements on the degree to which the identity of a subject or resource can be proved to be the one claimed.

1. (to be filled)

7.1.7 Maintainability

Contraints on the degree of effectiveness and efficiency with which a product or system can be modified by the intended maintainers.

7.1.7.1 Modularity

List of requirements on the degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.

1. (to be filled)

7.1.7.2 Reusability

List of requirements on the degree to which an asset can be used in more than one system, or in building other assets.

1. (to be filled)

7.1.7.3 Analysability

List of requirements on the degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.

1. (to be filled)

7.1.7.4 Modifiability

List of requirements on the degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.

1. (to be filled)

7.1.7.5 Testability

List of requirements on the degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.

1. (to be filled)

7.1.8 Portability

Contraints on the degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

7.1.8.1 Adaptability

List of requirements on the degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.

1. (to be filled)

7.1.8.2 Installability

List of requirements on the degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.

1. (to be filled)

7.1.8.3 Replaceability

List of requirements on the degree to which a product can replace another specified software product for the same purpose in the same environment.

1. (to be filled)

7.2 Other Constraints

Any other unclassified constraints judged as required for the product under development.

Appendix B

Specification project lu.uni.lassy.excalibur.examples.icrash

B.1 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the Messir method and inspired by the standard Cokburn template [?].

B.1.1 Use Cases

B.1.1.1 subfunction-oeCloseCrisis

the `actCoordinator`'s goal is to declare a crisis as closed.

Use-Case Description	
Name	oeCloseCrisis
Scope	system
Level	subfunction
Primary actor(s)	
1	`actCoordinator[active]`
Goal(s) description	
the `actCoordinator`'s goal is to declare a crisis as closed.	
Protocol condition(s)	
1	the iCrash system has been deployed.
Pre-condition(s)	
1	none
Main post-condition(s)	
1	the crisis is know by the system to be closed.
2	a message `ieMessage(AMessage)` is sent to the `actCoordinator` to inform him that his crisis is now considered as closed.

Figure B.1 shows the use case diagram for the oeCloseCrisis subfunction use case

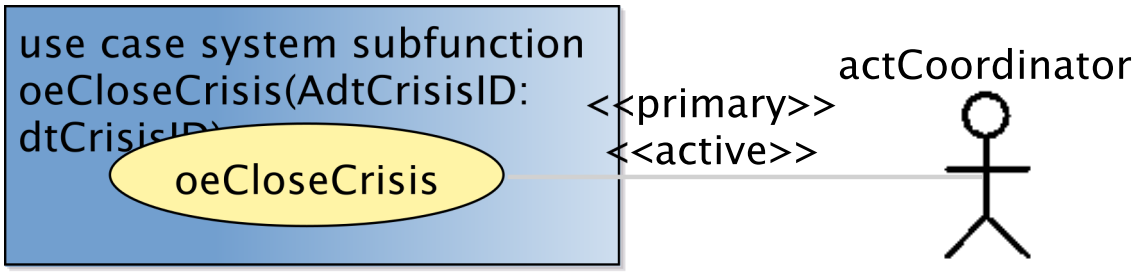

Figure B.1: oeCloseCrisis subfunction use case

Glossary

abstract actor an actor that is not 22

actor An actor is a person, organization, or external system that plays a role in one or more interactions with the system 18

direct actor an actor that interacts directly with the system. It thus belongs to the environment. 22

indirect actor an actor that interacts indirectly with the system through a direct actor. It thus belongs the domain but not to the environment. 22

system operation a functionality of the system that can be triggered by a message sent by an actor belonging to the environment. 18
